

# EDC187C Specification

## 5.8GHz Basic Series Modules

### Product Features

- Good directionality, low power consumption and superior performance
- Unaffected by temperature and humidity, dust, noise, etc., with strong adaptability
- Penetrates acrylic, glass and thin non-metallic materials
- CE, FCC certified

### Electrical Parameters

Input Voltage	5-12V
Operating Current (convention)	1.3±0.2mA
Output Voltage	3.3V
Output Signal	IO
Power Consumption	<0.5W

### Functional Parameters

Positive Sensing Distance <sup>①</sup>	15-80cm
Side-mounted height	(convention) 1.2m
Delay time	0.5s

### Output Parameters

Center frequency	5.8GHz±75MHz
3dB Beam Angle	97° (XZ plane) 99° (YZ plane)

### Environment & Lifespan

Operating Temperature	-20~+85°C
Storage Temperature	-40~+105°C

#### Remarks:

①The test distance range is based on the sensor hanging height of 3m, indoor installation environment test, the height of the test person 170cm, weight 65-75kg, walking speed of 1m/s, the test person's height 170cm, weight 65-75kg, walking speed 1m/s. Different scenarios may cause changes in the range of installation, subject to the actual test.

## Detection Schematic

## Dimension Drawing / Pinout

Size unit:mm

### Pin Description

Pinout	Description
V(VCC)	Power supply pin: 5-12V
O(OUT)	3.3V high and low levels
G(GND)	Groundings

EDC187C Dimensional tolerance:  $\pm 0.2$   
Welding hole of the row of pins:  $\phi 0.9$

## Timing Diagram

## ⌚ Application Scenarios/Products

corridors

elevator shaft

flight of stairs

bulb

downlights

ceiling lamp

T-tube lamp

## ⌚ Functional Description

After initialization is complete, when the ambient light is sufficient, the sensor detects moving objects and the light will not automatically turn on

When the ambient light is insufficient, the sensor detects moving objects and the light automatically lights up

The moving object leaves, and after a preset delay, the light will automatically turn off

## Product Naming Law

ED	Frequency Band	Product Categories	Product Subdivision	Product Number	Delay Time	Serial number
ED	C	1	8	7C		
EasyDetek	C 5.8GHz	1 Microwave sensor module	0 Ultra-low-power series	0-9, A-Z	Y Has light sensor	
	X 10.5GHz	2. Microwave radar switch	1 Flagship series		N no light sensor	
	Q 24GHz	3 Radar antenna	2 Short-distance series		P programmable	
	V 60GHz	4 MCU	3 Adjustable series			
	W 77GHz	5 Microwave power supply	4 External antenna series			
		6 IC	5 General Series			
		7 Other	6 To be defined			
		8 Networking	7 To be defined			
			8 Basic series			
			9 High altitude series			

## Configuration Version Description

【material number】:EDC187C-0.5N-03

【hardware】:

【software】:

## Historical Revision Record

Version	Time	Descriptive	Note
V1.0	2025-03-14	first edition	

## Precautions

1. When installing the product, it is recommended to maintain a distance of 5-12mm between the antenna board and the metal plane, and not to tightly adhere or touch the metal plane.
2. The product has good penetration effect on plastic and wood materials. It is recommended not to install metal, glass, or ceramic in front of the antenna to avoid affecting the actual sensing effect.
3. Please use a power supply with low ripple to avoid sensor interference and false alarms. It is recommended to ensure that the power supply ripple is within 50mV-100V.
4. When multiple radar sensors are applied in the same site, it is recommended that the installation distance of the product be greater than 2m. Installing too close may result in occasional false alarms from individual sensors.
5. The radiation surface of the antenna should avoid being covered by high current circuits to prevent interference with the normal radiation of the antenna, leading to false alarms or changes in the sensing range.
6. When microwave sensors are used in conjunction with wireless communication modules (NB, Bluetooth, WIFI, 2.4G modules), they should be spaced apart. It is recommended to maintain a distance of at least 1m from high-power wireless communication devices such as routers and wireless hotspots during installation.
7. The light sensitivity threshold is the test value under clear weather conditions, no shadows, and diffuse reflection of ambient light.
8. The antenna surface of microwave sensors should avoid facing directly towards the driving power supply, and should also be kept as far away as possible from high-power components such as rectifier bridges, transformers, and switching tubes of the driving power supply to avoid false alarms.
9. EasyDetek Technology is committed to providing customers with high-quality and better experience radar sensors. Product version updates and iterations will not be notified separately.
